

## cPanel Upload:

- ☐ Login to **cPanel**
- ☐ Go to **File Manager**. You should be in the **public\_html** folder if Setup was completed.
- ☐ Click the +Folder button and create a new folder to hold your assignment. Select the button Create New Folder. Once the folder is created, traverse to that folder (it will be empty).

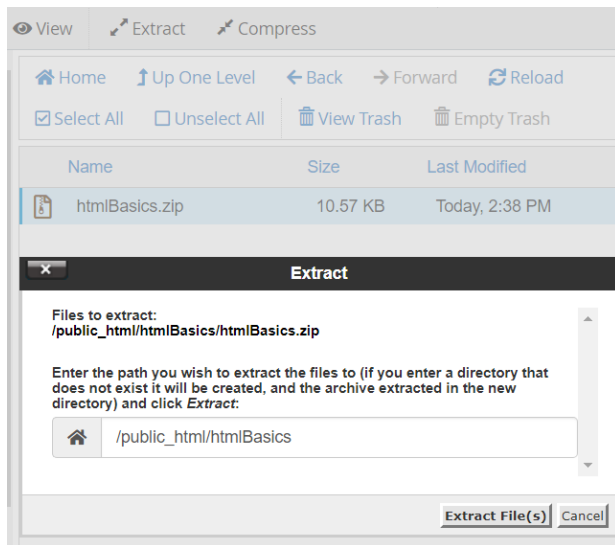

- ☐ Click the **↑Upload** button and find the ZIP file you created of your assignment. You can either **Select the file** or drag ZIP onto the screen. By checking the box **Overwrite existing file**, cPanel will show you the upload progress. Once the upload is complete, click the **←Go Back** link at the bottom of the page.

Select the file you want to upload to “/home/cadgeran/public\_html/htmlBasics”.

- Once the ZIP is in cPanel, we now have to **unzip it to view our file**. Select the ZIP file and click the **Extract** button. If you are in the new folder you created, you can just click the **Extract Files** button. You could also upload the ZIP into a folder and then extract into another folder by adding **/NewFolderName** at the end of the path line. The extraction will list all files/folders extracted. Just click the **Close** button to close this page.

- Go to your browser and enter your Primary Domain; this can be found on the cPanel main page. Traverse to the appropriate folder; Once the site is displayed, copy this link to include in the drop box Comment section
